

EVER-SILIC[®]

SILICONE

FLUID APPLIED COOL ROOF SYSTEM

15 YR SYSTEM QUICK SPEC
CONCRETE

32 Wet Mils (813 μ)
Silicone Top Coat

DESCRIPTION

The EVER-SILIC[®] COOL ROOF RESTORATION COATING SYSTEM for CONCRETE is a high volume solids elastomeric silicone coating system that provides superior weather-proofing and high UV resistance over a variety of roof substrates. Tested and certified to meet Cool Roof Rating Council (CRRC) and EPA guidelines for ENERGY STAR compliance. Also available in low volume solids (Ever-Silic LS). Withstands ponding water!

BASIC USES

The EVER-SILIC SYSTEM is a tough, durable application designed to extend the life of a wide range of roof top environments from premature weathering and moisture intrusion. It is effective as a protective membrane to coat an entire roof, to use for spot repair.

The EVER-SILIC[®] SYSTEM provides tenacious adhesion with an existing roof system to form a monolithic membrane. The result is a CRRC and ENERGY STAR system that exceeds all Title 24 requirements.

FEATURES & BENEFITS

- Prolongs the life of an existing roof membrane while helping to lower internal temperatures and reduce cooling costs.
- Hydrophobic – highly resistance to water penetration
- High tensile strength and abrasion resistance
- Excellent adhesion to a variety of roof substrates
- Ease of application - extremely fast and simple to install
- Can be used to reinforce and seal seams, penetrations, transitions, terminations, and to make spot repairs
- Slows degradation caused by normal weathering, aging, and UV rays
- Economical - extends the life of your existing roof
- UL-790 Class "A" fire resistance rating

WARRANTY

Everroof offers two Limited Warranties:

- (1) Material Only Warranty - No Charge
- (2) Labor & Material Warranty - For Approved Applicators Only
Fees will apply. Consult your Everroof representative.

See Warranty System Sheet for Dry Film Thickness Requirement.

REQUIRED MATERIALS

- Everroof Primer M80
- Ever-Silic[®] HS
- Ever-Silic Fast Flash or
- Ever-Thane Fast Flash
- Ever-Fabric
- High Strength Concrete Grout

15 YEAR SYSTEM COVERAGE for CONCRETE SYSTEMS

SYSTEM DESCRIPTION

The **EVER-SILIC[®] SYSTEM** can be described by using three comprehensive products to cover and protect your roof:

(1) EVERROOF[®] Primer M80 is a two component, liquid applied, solvent based epoxy-polyamine primer with unique penetrating characteristic. It has quick/re-coat times and is low viscosity.

(2) EVER-SILIC[®] HS is a versatile, low VOC, single-component, high solids, liquid silicone coating designed to be used as a base coat and a top coat on concrete roof systems.

STORAGE & HANDLING

Keep containers closed, and store in a dry, cool place away from heat, sparks, open flame, and moisture. Keep material stored above 65°F (18°C) and on wood pallets off concrete floors. Open containers should be blanketed with dry nitrogen before resealing.

TECHNICAL DATA / PHYSICAL PROPERTIES

		1 gal. (3.79ℓ) Can 5 gal. (18.93ℓ) Pail 55 gal. (208.2ℓ) Drum
		1½ gal. / 100 sq. ft. @ 24 wet mils 610 μ (5.68 ℓ / 9.29 m²)
TECHNICAL DATA		
Color		White, Grey, Tan
Shelf Life		8 Months
Curing (75°F-24°C, 50% R.H.)		6-8 Hrs.
PHYSICAL PROPERTIES		
Hardness Shore A, ASTM D-2240		55 ± 2%
Tear Resistance, ASTM D-624		45 lbs./in. (7.88 $\frac{\text{mm}}$)
Tensile Strength, ASTM D-412		300 psi (2.07 MPa)
Elongation, ASTM D-412		200 ± 15%
Specific Gravity		1.34
% Solids by Weight, ASTM D-2369		98%
% Solids by Volume, ASTM D-2697		98%
Viscosity at 77°F (25°C)		8,000 - 11,000 cps
VOC, ASTM D-2369-81		48g/L (0.40lbs/gal)
Reflectivity		0.88
Emissivity		0.91
SRI		112

ADHESION TEST

To ensure successful application of the EVER-SILIC® SYSTEM, always perform several adhesion tests (ASTM D-903) with the EVER-SILIC coating to ensure the roof substrate will accept the coating. Do not proceed with coating system without prior testing.

PRE-INSPECTION

Pre-inspect roof for necessary repairs before application of coating system. Inspection should include but not limited to the following:

- HVAC flashings
- Ponding water
- Parapet wall conditions
- Wet or damp insulation
- Sign or display anchorage
- Seams, terminations, transitions, and reglets
- Water leakage
- Substrate damage or disrepair
- Proper drainage/obstructions
- Copings and flashings
- Sleepers & pitch pock

SURFACE PREPARATION

(1) Remove all unnecessary and non-functional equipment and debris from the roof. (2) Remove dirt, and foreign material detrimental to adhesion or application of fluid-applied roofing by thoroughly cleaning all roof surfaces with a high pressure (2,000 - 2,500) (13.79 MPa - 17.24 MPa) wash. Surfaces contaminated with oil, grease, animal fats, etc. must be removed using tri-sodium phosphate and water, or other solutions as required by job conditions and as permitted by local and federal regulations. Remove all cleaning solutions with plenty of fresh water and allow to dry. (3) Make every effort to remove asphaltic roofing residue. Removal efforts must include use of methods such as pressure washing, scrappers, grinding, wire brushes, electrical drill wire-wheels, or other similar tools. Consider complete shot blasting and grinding when necessary. For cracks and fissures less than 1/8" wide, and all joints, stress areas, and roof penetrations prime at the theoretical rate of 1/3 gal/100 sq. ft. (1.25ℓ/9.29 m²) @ 5 wet mils (127 μ), allow to dry. Then detail with EVER-THANE FAST FLASH™. All large gaps and cracks (greater than 1/4") shall be repaired using a high-quality concrete grout. Grout must be fully cured before

SURFACE PREPARATION

application of coating products. Prime cured grout at the theoretical rate of 1/3 gal/100 sq. ft. (1.25ℓ/9.29 m²) @ 5 wet mils (127 μ), allow to dry then detail with EVER-THANE FAST FLASH™. EVER-THANE FAST FLASH™ shall extend a minimum of 3 inches (7.62 cm) beyond the edges of the repairs of gaps. (4) Seal water-tight using EVER-SILIC FAST FLASH™ or EVER-THANE FAST FLASH all round projections, machine legs, sign posts, guide wire straps, inside and outside corners, cant strips, gutters, parapet walls, caps, and seal watertight all screws, seams, skylights, joints, pipes, voids, protrusions and any areas where water could enter through the roof. (5) Clean and seal all areas around drains watertight. For added strength consider adding Ever-Fabric into the Ever-Thane Fast Flash (6) Allow roof and other prepared surfaces to dry completely before proceeding with field priming and/or coating application. Note: Thickness values of cured film are averages and can vary due to finish of surface. **ALWAYS CHECK THE WEATHER PRIOR TO APPLICATION.** Depending on the ambient, and substrate temperatures, relative humidity, and dew point take extra time and caution when applying the system within 2 to 6 hours of precipitation and/or when raw or freezing temperatures are experienced or anticipated. Do not apply over wet insulation or related materials.

COATING APPLICATION

Apply EVERROOF® Primer U11 to the substrate at a theoretical coverage rate of 1/3 gal/100 sq. ft. (1.25ℓ/9.29 m²) @ 5 wet mils (127 μ), and allow to dry. Then apply EVER-SILIC® HS base coat at the rate of 1.0 gal/100 sq. ft. @ 16 wet mils (3.79 ℓ/9.29 m² @ 406 μ). Once cured, inspect roof for application of topcoat. Apply EVER-SILIC® HS top coat at the rate of 1.0 gal/100 sq. ft. @ 16 wet mils (3.79 ℓ/9.29 m² @ 406 μ) to yield a total of 32 wet mils (813 μ) of coverage (minimum requirement for 15 year material warranty)

If applying higher mil thickness of EVER-SILIC HS, DO NOT EXCEED 3½ GALLONS PER SQUARE (13.27ℓ per 9.29 m²) PER APPLICATION. This could cause blisters and/or pinholes. Care should be taken to avoid sagging, pinholes, and runs of the coating on vertical, horizontal, and slanted surfaces to prevent sagging.

Application rate may need adjusting if topcoat starts to sag on verticals. If adjusted, allow base coat and/or top coat to dry 24 hours between coats. Additional coats may be necessary to achieve required mil thickness. EVER-SILIC® Accelerator for topcoat may be used to avoid pinholes and/or blisters. Actual required application rate will depend on system specified and length of warranty. For low areas that accumulate ponding water, apply a liquid roof patch to level the recessed area prior to coating. EVER-SILIC LS is also available for a low solid application. EVER-SILIC Accelerator is also available for faster cure times.

Protection: After completion of application, do not allow foot traffic on coated surfaces for a period of at least 48 hours at 75° F and 50% R.H., or until completely cured.

EQUIPMENT

Spray Applied - See EVERROOF's Spray Application Guide.

Dipped and Rolled - Brushes of various sizes and a 3/8" (9.52 mm) nap roller should be used when applying on smooth surfaces such as concrete.

THIS QUICK SPEC IS MEANT ONLY AS AN OVERVIEW OF INSTALLATION PROCEDURES. IT IS NOT MEANT TO REPLACE THE DETAILED SPECIFICATION REQUIREMENTS THAT APPEAR IN THE LOW SLOPE RESTORATION SYSTEM SPECIFICATIONS. ALWAYS REVIEW THE DETAILED SPECIFICATION PRIOR TO BEGINNING ANY PROJECT. Published technical data and instructions are subject to change without notice. Contact your local EVERROOF® representative or visit our website for current technical data and instructions.
