#### DIRECTIONS FOR USE

**MIXING:** EVERROOF® Primer M100 should not be diluted under any circumstance. The volume mixing ratio: 4 units Side-A yellow liquid to 1-unit Side-B off white liquid. EVERROOF® Primer M100 Side-A and Side-B should be thoroughly mixed prior to combining to ensure a homogeneous material. The combined components should be thoroughly blended using a mechanical mixer at slow speed for < 3 minutes or for at least 5 minutes if mixed by hand.

**APPLICATION:** Remove all contaminants, oil and grease from substrate. EVERROOF® Primer M100 should be applied at the rate of 1 gal/200-300 sq. ft. (mixture of Side-A & Side-B) (3.78l/ 18.58 - 27.87 m<sup>2</sup>) depending on substrate. It can be applied using an airless sprayer, brush, or phenolic resin core roller. Allow EVERROOF® Primer M100 to become tack free before applying the coating. Recommended surface temperature should be greater than 50°F (10°C). EVERROOF® Primer M100 is sensitive to heat and moisture. Higher temperatures will significantly accelerate the cure time and decrease pot life. Use caution in batch sizes and thickness of application. Low temperature and/or low humidity will extend the cure time.

#### LIMITATIONS

This information is meant to be used as a general guideline only. Consult the project specification and your EVERROOF® Representative for specific installation procedures.

EVERROOF® Primer M100 is not UV stable and cannot withstand direct wear or abrasion.
